

AG-..

Galvanised extendable steel rods (round shape, ø 16 mm)

Application:

- For the evacuation of fault currents to earth.
- Extendable rods: the rods are connected to each other with the [MA](#) sleeve. The last rod receives the [PI](#) point.

Features:

- Steel with galvanization: according to EN ISO 1461 standard (average thickness 85 µm)
- Resistance: ≥70 daN/mm²

Accessories:

- Driving pins: [CH-L](#) (small), [CH](#) (large), [CH-MP](#) (with handle)
- Connecting terminals: [B](#) (bronze) and [D](#) (galvanised steel) models

Network Type : LV
