

Z-VAT-DC / CL-6

Network Type : MV-LV

Bipolar DC voltage detector 120-1500 V DC. Magnetic plug for rail contact.

Application:

System for checking the absence of voltage on a rail network supplied with direct current from 120 V to 1,500 V:

- Presence of voltage indicated by the lighting up of 6 red LEDs and the emission of an audible signal.
- Function control of the integrated device which validates all detector functions. :
  1. Contact the handle's magnetic shoe with the rail and shunt the assembly by making contact between the magnetic handle and the contact hook;
  2. Press the test button: 6 red LEDs light up, audible signal sounds;
  3. Release the test button: momentary illumination of the 6 green LEDs.

Features:

This system consists of :

- Audible and luminous 120-1,500 V DC voltage detector with type C nozzle;
- Contact vee electrode;
- Magnetic plate for rail mounting;
- 10 m connecting cable;
- Soft case.
